MUTATED CITRULLINATED VIMENTIN (MCV) AB

<20

Desired Range: <20 U/mL

Anti-mutated citrullinated vimentin antibody may be used as a second-line marker of rheumatoid arthritis, in addition to rheumatoid factor and anti-cyclic citrullinated peptide (CCP).

Autoimmune Screening Test (ANA with Reflex) FINAL

Result

ANA SCREEN, IFA

NEGATIVE

Desired Result: NEGATIVE

ANA IFA is a first line screen for detecting the presence of up to approximately 150 autoantibodies in various autoimmune diseases. A negative ANA IFA result suggests an ANA-associated autoimmune disease is not present at this time, and does not reflex further. If there is high clinical suspicion for Sjogren's syndrome, testing for anti-SS-A/Ro antibody should be considered. Anti-Jo-1 antibody should be considered for clinically suspected inflammatory myopathies.

AC-0: Negative

International Consensus on ANA Patterns (<https://doi.org/10.1515/cclm-2018-0052>)
