Plan

Labs -
- IGeneX - tick-borne disease panel 4. You will need a blood draw for this.
- Real Time Labs - urine mycotoxin test. Try to have a hot bath or infrared sauna the night before.
- Doctor's Data - urine heavy metals test provoked with 2000mg DMSA. On the morning of this test, wake up and empty your bladder, then take all the capsules on an empty stomach. Collect urine for 6 hours. You can eat/ drink normally 30 mins after taking the DMSA.

Supplement protocol -

- Glutathione - one teaspoon on empty stomach first thing in the morning (can eat/drink 10 mins later).
- Smilax - 30 drops twice daily in water (roughly one dropperful).
- Detox Support Formula - 30 drops twice daily in water (can mix with smilax).

Once you are on those for a few days you can start the following co-infection provocation -

Week One: teasel root - 5 drops twice daily. Herb for Borrelia.

Week Two: artemisinin SOD - 2 capsules twice daily. Herb for Babesia.

Week Three: HH2 - 3 capsules daily (2 in am/ 1 in pm or vice versa). Herb for Bartonella.

* Each week you add the next one so by the end of the provocation you're taking all three.

* Make sure to take notes along the way about how you're feeling and what you're noticing with symptoms.

* 30 drops of the tinctures is approximately one dropperful - it's the amount that fills the glass tube when you squeeze the bulb. The entire tube will not fill up and that's ok.
